

2009 Aerospace and Defence
Regional Conferences
Meeting the Threats of the Next Decade

Perth: 29th April 2009, Tradewinds Hotel, Fremantle

Adelaide: 1st May 2009, Technology Park Conference Centre, Mawson Lakes

Engineers must optimise a complex, delicate balance of portability, speed, power, weight and space. To win and be profitable, aerospace and defence suppliers must take advantage of industry-leading COTS hardware, operating systems, and middleware; consider using advanced multicore processors to achieve required performance; integrate legacy and new applications, often from multiple teams and subcontractors; and even ensure safety and security by complying with strict certification standards such as DO-178B, Common Criteria, and IEC 61508.

Attendees will learn about the latest in multicore processors and their support for robust operating software environments such as ARINC 653 APEX environments and multilevel secure products using the multiple independent levels of security (MILS) architecture.

- 9.30am** **Registration**
- 10.00am** **Chip Downing - Director, Business Development, Aerospace & Defence, Wind River**
"Latest trends in Software for Embedded and Real-time Systems"
- 10.45am** **Walter Breunig – Director, Dedicated Systems Australia Pty Ltd**
"Emerging Standards in COTS Hardware"
- 11.15am** **Vinay Panchdhari - Senior Manager, Field Engineering APAC, Wind River**
"Multicore and Virtualisation and their use in Embedded Systems"
- 12.00pm** **Q&A Session, Door Prize and Light Lunch**
-

**DEDICATED
SYSTEMS**

BOOK NOW and reserve your place at this **FREE** seminar by contacting
info@dedicatedsystems.com.au or (08) 8299 9333

This seminar is open to all but places are strictly limited.
